Summary

4rd-year CS student at NKUA, building things in the AI/ML and backend space. I've shipped production-level projects end-to-end and I'm looking for an internship or junior role where I can actually contribute.

Education

National and Kapodistrian University of Athens (NKUA) **Athens, Greece**
Bachelor's in Computer Science — GPA: 8.2/10.0 *Expected 2027*

Relevant Coursework: Algorithms & Complexity, Machine Learning, Operating Systems, Distributed Systems, Graph Theory.

Awards & Competitions

1st Place — TechBiz Hackathon, NBG Challenge
National Bank of Greece (NBG) — 1st in NBG Track, 3rd Overall

- Co-developed **Next Jr.**, a full-stack youth banking platform using **Next.js** and **Anthropic's Claude API**.
- Shipped a dual-codebase MVP with GDPR compliance and REST API mockups in under **24 hours**.
- Live Demo Repository

Technical Projects

End-to-End MLOps Pipeline | *Python, FastAPI, Docker, MLflow, DVC, GitHub Actions* [Link]
– Built a full ML pipeline for bank customer churn prediction on 10k samples: trained and compared 3 models (Random Forest, Gradient Boosting, Logistic Regression), achieving best ROC-AUC of 0.730.
– Used **DVC** for data versioning and **MLflow** for experiment tracking: deployed as a **FastAPI** service inside **Docker**.
– Added automated data drift monitoring with **Evidently AI** and a **GitHub Actions** CI/CD pipeline with unit tests.

Multi-Tenant AI RAG System | *FastAPI, ChromaDB, Celery, Redis, Kubernetes* [Link]
– Developed a production-ready **RAG**-based document chat backend with file upload and semantic querying: 13k+ LOC, 55 API endpoints, and 330 tests.
– Implemented async background tasks with **Celery** & **Redis**, and real-time LLM streaming via **WebSockets**.
– Enforced full **RBAC** (role-based access control) and included **Kubernetes** deployment manifests for production use.

Certifications

Workshop Series: Innovation, Entrepreneurship & Deep Tech **Nov 2025**
EIT Higher Education Initiative (European Institute of Innovation & Technology)

Technical Skills

Languages: Python, C++, SQL, TypeScript, JavaScript.

Machine Learning & AI: PyTorch, Scikit-learn, ChromaDB, Anthropic SDK, Evidently AI, RAG, LLM integration.

Backend & Infrastructure: FastAPI, Flask, PostgreSQL, Redis, Celery, Docker, Kubernetes, GitHub Actions (CI/CD), MLflow, DVC.
